

SharePoint 2010 MCM Pre-Reading List

How to Use the Pre-Reading List

The Microsoft Certified Master: SharePoint Server 2010 program covers the comprehensive SharePoint Server platform. It is a very demanding course and will challenge the limits of most candidates. In order to ensure that candidates are well-prepared, we provide this list of pre-reading material. It is not a conclusive set of reference material but rather it is intended as a list of pre-readings which provide a baseline for the topics covered during the training rotation. For many, items contained here will be review. However, each applicant is encouraged to inspect the entire list to ensure they are up to date with the information represented, as it will be needed as a starting basis and referenced throughout the training.

- **Before Submitting Your Application: Prepare for the screening interview.**
 - SharePoint MCM covers IT pro, developer, and architect topics. While applicants are not expected to be experts in every focus area, they are expected to have broad knowledge of most focus areas and depth in several areas.
- **Before Attending Your Rotation: Ramp up for deep discussions, team exercises, and labs.**
 - Being unfamiliar with any given topic will make for an unproductive classroom experience.
- **During Your Rotation: Study for exams.**
 - Exams cover course materials, pre-readings, and hands-on experience for every topic.
- **After Your Rotation: Study for retakes.**
 - Many candidates do not pass all exams on the first attempt.

Notes:

- With the exception of the “Resource Center” landing pages, assume that **all** subtopics on the TechNet & MSDN articles are recommended reading.
- Use the Resource Centers for exploring topics where you have the least hands-on experience. This may help fill in your knowledge gaps in these areas.
- SharePoint 2010 documentation is constantly evolving. While this reading list will be subject to periodic revisions, we recommend that you stay up-to-date on the latest content via the [Newly Published Content](#) list on TechNet.
- There are a significant number of redundant links in the reading list – some links are subtopics of other links. This redundancy is in place to ensure coverage of key topic areas.
